Sajith Chandran

Senior Vice President of Technology, Narayana Health

Hands-on healthcare technologist · 24 years · healthcare only

Bengaluru, India sajithchandran@gmail.com linkedin.com/in/sajithchandran-003593b

A hands-on technologist who has spent an entire 24-year career in one domain: healthcare. I have designed and built hospital information systems — HIS, EMR, LIS, RIS and PACS — from code to architecture, and deployed them across the USA, Canada, the UK, the Middle East, India and Asia-Pacific. Today I lead technology at Narayana Health, where I conceived and architected the Athma platform, and I founded Daiva Health to make open-source healthcare software available to every hospital, clinic and doctor. I stay close to the design and the code.

24 years
Healthcare technology, and nothing else

Hands-on
Engineer to architect to technology head, always building

4 generations
Amrita HIMS, rCare + rChive, HINAI, Athma

6 markets
USA, Canada, UK, Middle East, India, Asia-Pacific

SELECTED IMPACT

- Conceived, architected and built **Athma**, an eight-product clinical platform spanning EMR, lab and radiology, bedside, critical care, analytics, AI and a patient app.
- Founded **Daiva Health**, which publishes free, open-source healthcare software: athma CE (HIS + EMR), padma (clinical pathways) and aiorta (clinical research).
- Shipped four generations of hospital systems from the ground up: Amrita HIMS, rCare + rChive, HINAI and Athma.
- Built and lead the engineering organisation behind Athma.
- Delivered hospital systems into six markets with different regulatory regimes.

ATHMA PLATFORM — PRODUCT & TECHNOLOGY OWNERSHIP

At Narayana Health I conceived and architected Athma end to end, and own its product roadmap and the engineering organisation behind it. Athma is a platform with a family of products on one patient record — from registration to the lab and radiology, from the ward to the ICU, and on to the patient's own phone.

Athma Core
EMR + HIMS: registration, admission, orders, clinical notes, billing

Athma LIMS / RIS
Laboratory and radiology information management

AADI
Doctor app

NAMAH
Nurses' app for ward workflow

ICU App
Critical-care workflow

Athmatrix
Operational and clinical analytics

AIRA
Clinical and operational AI

NH Care
Patient app

EXPERIENCE

Daiva Health — Present

Founder

- Founded Daiva Health to remove cost barriers to healthcare technology: free, open-source digital and AI software for hospitals, clinics and providers of every size.
- Product catalogue, each with a public GitHub repository: **athma CE** (open-source HIS and EMR), **padma** (evidence-based clinical pathways) and **aiorta** (AI-assisted clinical research).

Narayana Health · Bengaluru

Jul 2016 – present

VP of Engineering (Jul 2016) → Senior Vice President of Technology (Jun 2024 – present)

- Conceived, architected and built the Athma platform and its eight products; own the roadmap and the engineering team.
- Designed Athma's integration layer: partner APIs and FHIR ingestion of patient, encounter, allergy and social-history data, plus walk-in integration (2021–23).

Ziller · Kochi

Nov 2015 – Jul 2016

Co-Founder

- Co-founded Ziller, a Kochi-based e-pharmacy start-up. Patients ordered medicines and healthcare products by photographing a prescription in the Android or iOS app, on WhatsApp or on the web.
- Built the service on neighbourhood drug stores: in-house pharmacists verified every prescription, and Ziller's own delivery team delivered within 90 minutes.
- Reached up to 100 deliveries a day, with more than 90% of early customers ordering again. Covered by Express News Service and Malayala Manorama.

ICT Health

Feb 2010 – Oct 2015

Technical Architect (2010) → General Manager (2012) → CTO, Dubai (2014 – 2015)

- Architected **HINAI**, ICT Health's hospital information system.
- As CTO in Dubai, led technology for the company's products and Middle East deployments.

Sobha Renaissance Information Technology (SRIT) · Bengaluru

Dec 2004 – Jan 2010

Software Engineer → Senior Software Engineer (2005) → Tech Lead → Technical Architect

- Built **rCare**, SRIT's hospital system covering HIMS, EMR and LIMS — the clinical and laboratory record.
- Built **rChive**, SRIT's RIS and PACS — radiology worklists and the image archive.
- Together they gave hospitals one record-to-image chain: admission, EMR, lab, radiology order, worklist, image archive.
- Promoted to Senior Software Engineer within six months; then moved into the Tech Lead and Technical Architect roles.

Amrita Technologies

Jan 2002 – Dec 2004

Software Engineer

- Member of the initial core team that built **Amrita HIMS**, a greenfield hospital information system.

SKILLS

Platform & interoperability	HIS / EMR architecture, HL7, FHIR, IHE profiles, integration APIs, requirements analysis
Imaging & diagnostics	RIS, PACS, DICOM, LIS / LIMS, radiology and lab workflow
Data & AI	Clinical and operational analytics, applied AI in clinical workflow, ambient voice-to-EMR, connected devices
Technology leadership	Hands-on system design and architecture, product ownership, platform strategy, open-source product building, building engineering teams, multi-country delivery, start-up co-founding

EDUCATION

Master's in Software and Information Systems
